

Tooling solutions for the power utility industry.

HP-510
UNIVERSAL
HAND PUMP

Specifications:

Weight	10 lbs.
Length	21"
Oil Capacity	20 cu/in

HP-510 - "THE ELIMINATOR" Husky - Universal Hand Pump

Features:

- * Two stage pumping piston
- * Dielectric Fiberglass Handles
- * Twist Release Mechanism
- * Carrying case included
- * Will operate most 10,000 psi remote head units
- * Adjustable pressure bypass cartridge. Use our PG-1 gauge to set pressure

The HP-510 hand pump is adjustable between 4,000 and 10,000 psi. It has a built-in 3/8" female, screw type coupler that will accept most 10,000 psi tools on the market today.

This pump features a two-stage rapid advance system with our patented replaceable by-pass cartridge.

The HP-510 is limited to the amount of oil in its reservoir. It can displace enough fluid to operate tools with a 20 cu/in capacity.

A non-conductive, high pressure hose can be connected for Hot Stick or trench work applications. The tool can be connected directly or with up to a 10' hose. Always use a "charged" hose to insure proper transfer of fluid. Longer hoses will increase working time.
