POWER-INSTALLED SCREW ANCHOR TOOLING SYSTEM

(For installing torques up to 10,000 ft.-lb.)

A complete tool system consists of: Kelly Bar Adapter, Torque Indicator, Locking Dog Assembly, and Drive-End Assembly.

Remove the auger from the digger and select the Kelly Bar Adapter by matching the shape of the Kelly Bar along with the "A" dimension (flat to flat on end of Kelly Bar) and the "D" dimension (end of Kelly Bar to center hole for bent arm pin) with the chart provided below.

Transmits Torque to Anchor Core

The wrench transmits torque from the Kelly Bar of the digger to the hub of the Power-Installed Screw Anchor so that the Anchor Rod needs to be only large enough in diameter to support the guy load.
