THIS SYMBOL INDICATES ITEMS OF EXTREME IMPORTANCE.

Safety of user and others may be in jeopardy if these instructions are not read and understood.

This **REL-750DM** compression head has been designed to crimp Anderson type and equivalent connectors manufactured to ANSI C119.4.

This model features a connector range up to 750 MCM and a 1.5 inch jaw opening providing ample space for easy die positioning. A two-stage advance piston. The first stage brings the crimp to the connector quickly, while the second stage provides the power to make the connection. The flip top design and 180° swivel head permit simple tool positioning, while the pull-pin closure will provide a safe positive lock.

SPECIFICATIONS

Length 19.	5"	Width	7.5"	Weight	9.5 lbs.
Pressure		3.2 tons	@ 10,0	000 psi (r	manual)
Capacity	Dieless connector range from # 10 to 750 MCM CU & AL				

FEATURES:

6.2 Ton output

Compatible with Anderson & equivalent dieless connectors.

Carrying case included.

Flip top design and rotating head provide easy placement around crimp.

Two stage pumping system
Eliminate the need for dies under
acceptable dieless applications.
Connector range from #10 to 750 MCM
Copper and Aluminum.

WARNING

BEFORE USING THIS TOOL, READ THE WARNINGS and the recommended practices described in this manual. Failure by the operator to read and fully understand these warnings will leave this person unqualified to use and operate this tool. Property damage, severe personal injury, and/or death could result by not following these warnings.

These warnings will appear in appropriate locations when they are pertinent to the particular subject being shown. Read each one carefully and follow them strictly.

Eye Protection

WARNING

Always wear eye protection to avoid injury from flying debris or hydraulic oil leaks. Failure to do so can result in serious personal injury.

WARNING

Hydraulic oil may cause irritation. Use care to prevent contact with skin. In case of accidental contact, wash affected area immediately

Hard Hat

WARNING

Always wear a hard hat to avoid injury from falling debris. Failure to do so can result in serious personal injury.

Foot Protection

Skin

Irritation

WARNING

Always wear foot protection.
Failure to do so can result in serious personal injury.

Hearing Protection

WARNING

Always wear hearing protection, to avoid hearing loss due to long term exposure to high noise levels.

Protective Gloves

WARNING

Always wear protective gloves Failure to do so can result in serious personal injury.

WARNING

COMPRESSION DANGER

This manual hydraulic crimping tool can injure and/or disable. KEEP ALL PARTS OF THE BODY AWAY FROM MOVING PARTS.

Failure to observe this warning could result in serious injury

ELECTRICAL SHOCK HAZARD

Always wear and use the necessary clothing, equipment and safety practices to protect against electrical shock. Failure to follow these rules can result in serious personal injury or death.

GENERAL SAFETY

USE ALL APPROPRIATE AND APPLICABLE PERSONAL SAFETY EQUIPMENT as required by the operating company.

<u>INSPECT TOOL BEFORE USE</u>. Replace any worn, damaged or missing parts. A damaged or improperly assembled tool may injure operator and/or nearby personnel.

KEEP ALL PARTS OF THE BODY AWAY from moving parts of the tool.

KEEP HANDS OUT FROM BETWEEN CRIMPING NODES AT TOOL HEAD.
ALL BODY PARTS SHOULD BE OUTSIDE DANGER ZONE PRIOR TO COMPRESSION.

MAKE SURE there is no person in close proximity to you or the tool who could be injured by any operation being performed, tool malfunction or flying debris.

DO NOT OVEREXTEND your position by overreaching or unbalancing the footing necessary to maintain physical control of your body and the tool.

ALWAYS MAINTAIN a firm grip on the tool to avoid loss of control during an operation, causing property damage, serious injury or death.

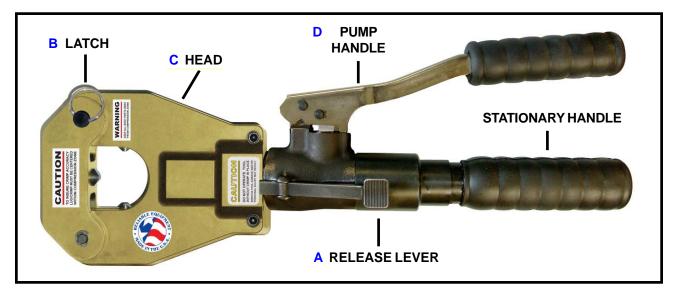

USE THIS TOOL FOR THE MANUFACTURERS' INTENDED PURPOSE ONLY.
OBSERVE CLOSELY ALL OF THE SAFETY RULES FOR A PARTICULAR JOB CLASS

Operation/Safety methods may vary in accordance with the working guidelines established by each utility or contractor. Ensure that you fully comply with all safe operation guidelines required by your employer.

FAILURE TO HEED THESE WARNINGS COULD RESULT IN PROPERTY DAMAGE, SERIOUS PERSONAL INJURY OR DEATH.

OPERATION

Read entire manual prior to using this tool. Refer to all safety cautions and warnings. Observe all safety precautions and procedures required by the operating company.

- Before crimping, ensure that subject is within the capacity listed for the tool. (see page 5)
 Ensure that Burndy or Anderson 6 ton dieless type compression sleeves are being used.
 WARNING: Crimping standard "H" Frame (Double Open Groove) connectors
 WILL cause tool damage and void warranty.
- 2. Retract compression nibs completely by pressing hydraulic release lever (A).
- **3.** Release latch (B), and open tool head for simple tool positioning around compression.
 - **NOTE:** Tool head rotates 180° to aid in proper compression alignment with less fatigue.
- **4.** Place subject in tool head (C) and close latch securely.
 - **NOTE:** Failure to secure latch may result in severe tool damage and/or personal injury.
- **5.** Position subject at a 90° angle to the tool compression head as shown in Figure 2.

CONNECTOR POSITIONING

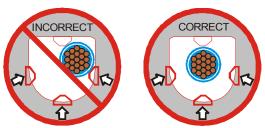

FIGURE 2

- **6.** Pump handle (D) to advance compression nibs up to subject. *Check tool alignment.*
- **7.** Pump handles until tool pressure builds up and "pop off" is felt. Full crimping pressure has been obtained.
- 8. Retract compression nibs completely by pressing hydraulic release lever (A).
- 9. Repeat procedure as required by compression sleeve or regulating authority.
- **10.** Visually inspect crimp for correctness.

IF YOU HAVE ANY QUESTIONS REGARDING THE PROPER USE AND/OR OPERATION OF THIS TOOL, CONSULT YOUR AREA SUPERVISOR, OR CONTACT RELIABLE EQUIPMENT.

Inspection & Testing requirements may vary in accordance with the working guidelines established by each utility or contractor.

For your own safety, ensure that you fully comply with all safe operation guidelines required by your employer.

CONDUCTOR PREPARATION

Strip insulation from the conductor, beign careful not to nick the strands. Use of a proper insulation stripping tool, or using the "Pencil" shaving method is recommended. Thoroughly clean the conductor by wire brushing until a bright shiny surface is obtained. All oxides and foreign matter must be removed.

NOTE: Do not wire brush tin-plated conductors or tinned connectors.

INSTALLATION OF SLEEVE CONNECTORS

1. Place sleeve in the nib opening. (strip off insulation jacket where applicable using the center band mark on the sleeve as a strip gauge.)

WARNING: Certain small service sleeve connectors can severely damage this tool by becoming wedged between nibs of the tool head. Observe warnings and connector positioning instructions as shown in Figure 2 on page 8

- 2. Using the pump handle, close the nibs until they contact the sleeve loosely.
- 3. Positioned the sleeve so that the nibs will make the first crimp adjacent to the center band mark.
- 4. Insert the conductor into the connector socket making sure that the conductor is pushed fully in against the center barrier.
- 5. Actuate the Pump handle and the nibs will start compressing the sleeve. A positive trip accompanied by a distinct "click" will occur when the crimp is fully made. Stop pumping.
- 6. Release the compressed nibs from the sleeve by compressing the release lever. The nibs should open sufficiently to allow the sleeve to be repositioned for the next crimping operation.
- 7. After the second conductor has been installed and crimped, remove the tool by pulling the latch pin out and opening the compression head.

INSTALLATION OF OPEN GROOVE (TAP) CONNECTORS

1. The tool head may be rotated to any desired position when the compression nibs are fully retracted. Prior to installing tap conectors, the tool head should be positioned at an angle which relieves awkwardness and operator fatigue.

WARNING: **DO NOT OVEREXTEND** your position by overreaching or unbalancing the footing necessary to maintain physical control of your body and the tool.

- 2. Place the tape side of the connector full into the tool so that the open side in the connector is facing between the top nib and either side nib. Close the nibs closely onto the conector with the rapid advanced handle making sure that the positioning grooves mate with two of the nibs. Follow the same instructions for compressing and releasing the connector as previously described for sleeve connectors.
- 3. Place the main groove of the connector full into the tool with the open side facing between the top nib and either side nib. Close the nibs loosely. Place the positioned connector against the main conductor by applying firm pressure with the tool handles. Compress the nibs for specificed number of crimps.
- 4. Remove the connector by retracting the nibs and opening the latch.

DAILY MAINTENANCE

The life, reliability, and safety of the tool is dependent on proper use and maintenance. STORE THE TOOL PROPERLY Before storing tools release pressur so that the crimping nibs fully retract. This protects the operating ram from moisture and condensation. NOTE: When the tool has been stored for extended period of non-use, the tools should be activated approximately every 3 weeks to keep o-rings and seals lubricated. Clean and inspect all surfaces including head, latch mechanism, ram, and body. Particularly avoid joint compounds from building up on the crimping nibs.

WARNING: Head and/or handles may cut or pinch. Please use extreme caution. Worn or damaged parts may malfunction during operation, causing more extensive damage to the tool and/or severe injury to the operator or bystander.

All parts must be replaced with new parts if signs of wear or damage are evident. Check relief valve pressure setting regularly, using the optional pressure gauge. (Optional - may be purchased from Reliable Equipment or your local Reliable representative). Valve should be adjusted or replaced by a trained service technician if necessary.

DO NOT MAKE ADJUSTMENTS TO THE TOOL . . . There are no adjustments on this tool which can be made in the field. If a tool becomes inoperative and the instructions in this booklet do not correct the malfunction have the tool serviced by RELIABLE EQUIPMENT or an authorized service provider.

Keep Label Set clean and legible. Replace decals when necessary.

GENERAL MAINTENANCE

This tool requires well-trained experienced personnel for major repairs, adjustments or maintenance. Complete disassembly is not recommended. Return the unit to an authorized dealer for total disassembly and/or repair. It is suggested that tools requiring repairs be returned to Reliable Equipment for correction unless overall local conditions are adequate and service training has been provided. Reliable Equipment is set up to provide quick maintenance and overhaul service. Contact your Reliable Equipment representative if service is required.

All maintenance or disassembly should take place on a flat, clean work surface covered with towels or wipers so as to have a clean space for the disassembled parts. Inspect each part during disassembly for wear, scratches, and cuts. Discard the worn or damaged parts and replace with new factory authorized parts.

O-rings are sensitive to sharp edges. Inspect closely for cuts or damage. A small cut will cause a leak. When assembling or disassembling O-rings, use hydraulic fluid as a lubricant to help disassembly or installation.

NOTICE: When disposing of hydraulic fluid, parts or components observe all federal, state, and local guidelines.

IF YOU HAVE QUESTIONS REGARDING THE REPAIR AND MAINTENANCE OF THIS TOOL CONTACT RELIABLE EQUIPMENT OR YOUR RELIABLE EQUIPMENT REPRESENTATIVE.

BEFORE USING THIS PRODUCT READ THE SAFETY WARNINGS and recommended practices described in the manual. Failure by the operator to read and fully understand the warnings will leave this person unqualified to use and operate the tool.

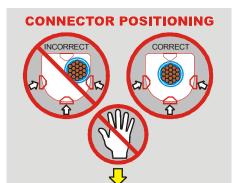

Failure to observe all warnings and instructions could result in property damage, severe personal injury, and/or death.

Secure latch before operating. Failure to secure latch can result in severe tool damage and personal injury.

Operation and safety methods may vary in accordance with the guidelines established by each utility. For your safety, ensure that you fully comply with all safe operation guidelines established by your respective power utility.

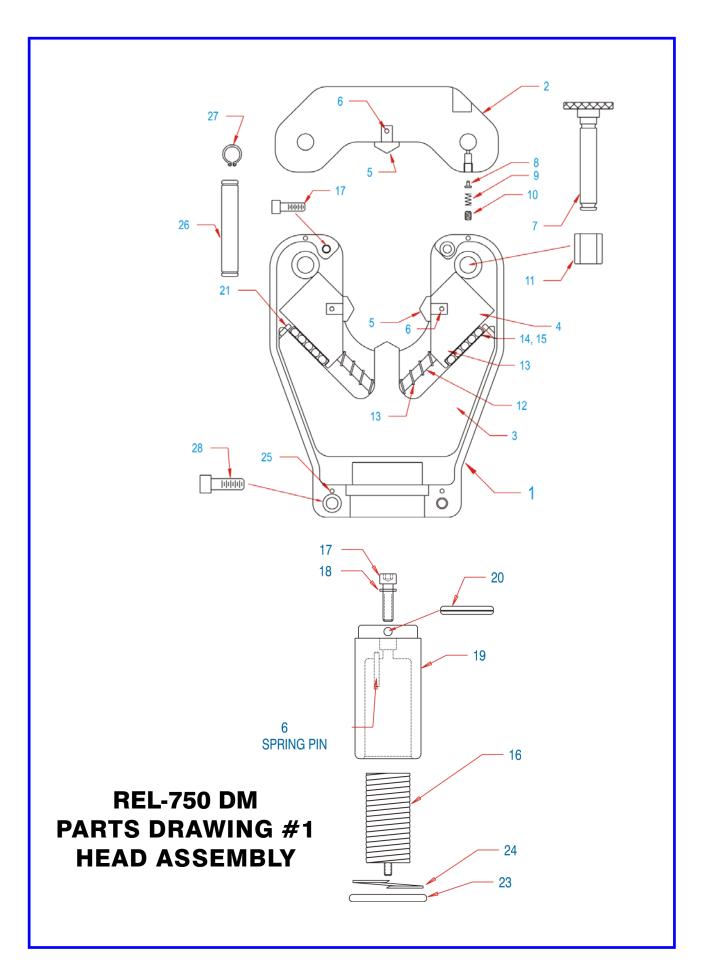

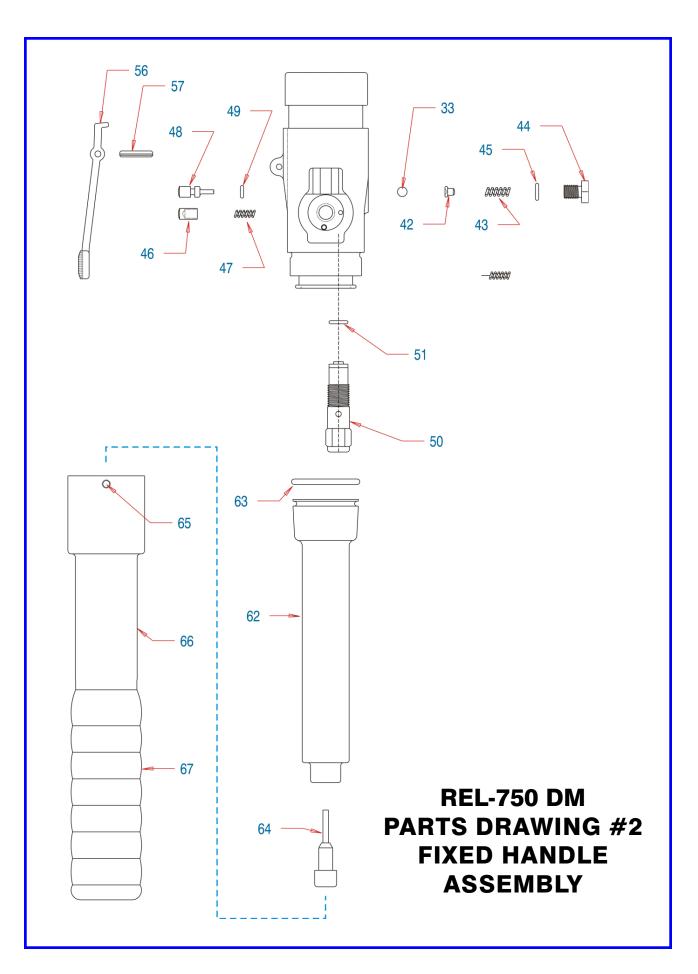

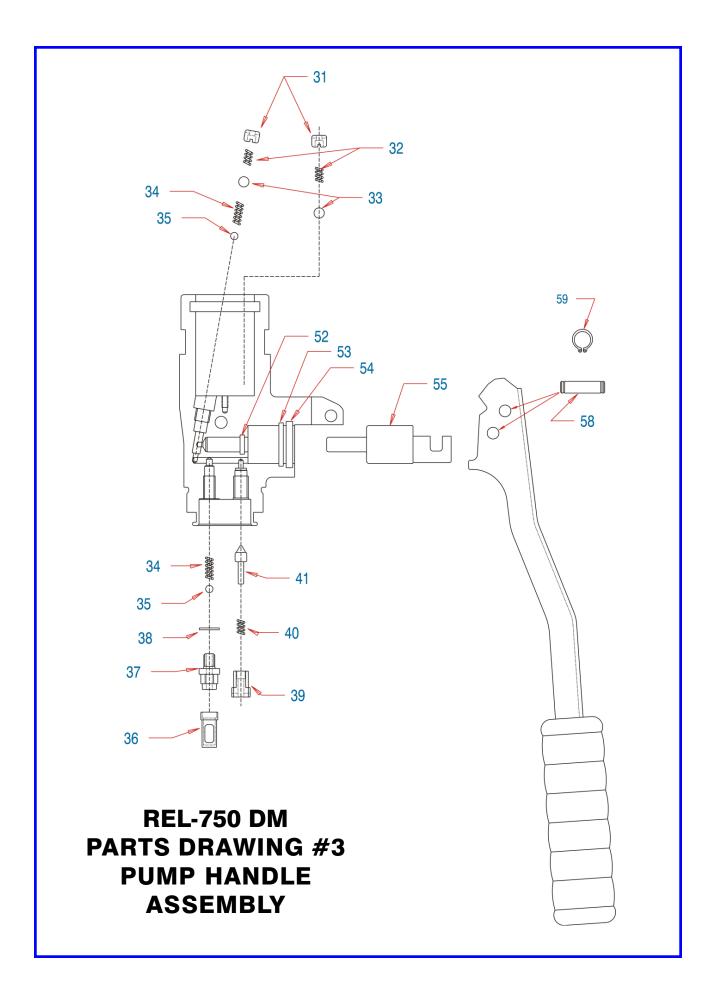

Secure latch before operating. Failure to secure latch may result in severe tool damage and/or personal injury.
